PROFESSIONAL SUMMARY

Java Backend Developer with 4+ years building high-availability microservices at enterprise scale at AT&T. Specialized in Java 8/17/21 and Spring Boot 3, with hands-on experience in cloud-native architectures using Docker and Kubernetes. Drives production stability end-to-end — from async pipeline design to security remediation (100+ vulnerabilities resolved). Looking to bring strong system design thinking and clean code practices to a product-driven engineering team.

TECHNICAL SKILLS

Languages:	Java, SQL
Frameworks & Libraries:	Spring Boot 3, Spring MVC, Spring Security, Spring Data JPA, Hibernate
Databases:	Oracle SQL, MySQL, PL/SQL
System Design & Architecture:	Microservices, Distributed Systems, High Availability, Scalability, HLD
Cloud & DevOps:	AWS, Docker, Kubernetes, Git, Maven, CI/CD Pipelines
Security:	JWT, OAuth 2.0, Vulnerability Management, SAST, SCA, DAST
API & Documentation:	REST APIs, Swagger UI
Logging & Monitoring:	Log4j, Dynatrace

WORK EXPERIENCE

Java Developer

Dec 2022 – Present

Accenture | Hyderabad, Telangana, India

Client: AT&T

- Designed and deployed cloud-native microservices using Spring Boot, Docker, and Kubernetes, achieving high availability and seamless horizontal scaling across distributed AT&T production environments.
- Designed and implemented an asynchronous scheduler using Java's Executor Framework to periodically fetch and process database records in parallel using multithreading, significantly reducing processing time and automating operational tasks, resulting in a ~90% reduction in manual effort.
- Migrated legacy Java projects from manual builds to Maven, reducing build time significantly, simplifying dependency management, and streamlining deployment processes across the team.
- Improved API reliability and response consistency for critical AT&T services by diagnosing and resolving 20+ data inconsistency and timeout bugs across REST (JAX-RS) and SOAP (JAX-WS) interfaces.
- Reduced recurring production incidents by leading end-to-end RCA, bug resolution, and regression testing - improving system stability and cutting repeat issue rates across the platform.
- Validated a large-scale Oracle DB migration from on-premises to cloud by executing API, stress, and load testing — ensuring all post-migration performance benchmarks were met without service disruption.
- Maintained data integrity across high-transaction Oracle environments by identifying and resolving critical PL/SQL data errors, preventing downstream failures in AT&T's billing and provisioning systems.
- Drove end-to-end remediation of 100+ security vulnerabilities (SAST, SCA, DAST) in collaboration with security teams, significantly reducing the application's attack surface and achieving compliance targets.
- Elevated codebase quality and architectural consistency by leading peer code reviews and participating in design evaluations, mentoring junior developers on clean code and scalability best practices.

Programmer Analyst Trainee

Feb 2022 – Aug 2022

Cognizant | Hyderabad, Telangana

- Trained on Core Java fundamentals and object-oriented programming concepts.
- Developed a stock trading application using Core Java and Spring Boot, implementing features for buying, selling, and tracking stocks.

Software Developer Intern

Dec 2021 – Mar 2022

ValueLabs | Hyderabad, Telangana

- Worked on SQL-based data extraction and transformation to support business reporting needs.
- Created business intelligence reports using QlikView, enabling data-driven insights for stakeholders.

EDUCATION

B. Tech in Electronics and Communication

July 2022

Institute of Aeronautical Engineering | Hyderabad, Telangana | CGPA: 8.42 / 10

KEY PROJECTS

LuxeLine E-Commerce Platform

Technologies Used: Java 21, Spring Boot 3, Spring Data JPA, MySQL, AWS, JWT, Spring Security, Swagger UI

- Developed a full-featured e-commerce REST API using Java 21 and Spring Boot 3, applying microservices architecture principles with clean separation of concerns across auth, product, and order domains.
- Secured all API endpoints using JWT-based authentication and Spring Security, implementing role-based access control for customer and admin flows.
- Designed a normalized MySQL schema with Spring Data JPA and Hibernate ORM, optimizing queries for efficient data retrieval across product catalog, inventory, and order management modules.
- Enforced data integrity across all endpoints using Spring Validation, and reduced boilerplate by 30%+ through Lombok, ModelMapper for DTO mapping, and Jackson for JSON serialization.
- Implemented centralized exception handling with meaningful HTTP error responses, improving API debuggability and client-side reliability.
- Configured Maven build tool for dependency management and seamless project compilation.
- Documented all API endpoints with Swagger UI, enabling self-serve testing and reducing onboarding time for new contributors.
- Deployed the application on AWS EC2, gaining hands-on experience with cloud infrastructure setup, environment configuration, and hosting a Spring Boot application on a live server.

AWARDS & ACHIEVEMENTS

- **Skill Star Award** — Accenture Celebrates Excellence (2024). Recognized for outstanding technical contributions and delivering high-impact solutions across the AT&T engagement.
