PROFESSIONAL SUMMARY

Java Backend Developer with 3.5+ years building high-availability **microservices** and distributed systems at enterprise scale (AT&T). Specialized in **Java 21**, **Spring Boot 3**, and cloud-native architectures on **AWS** with **Docker** and **Kubernetes**. Known for owning production stability end-to-end - from async pipeline design to security remediation (100+ vulnerabilities resolved). Looking to bring strong system design thinking and clean code practices to a product-driven engineering team.

SKILLS

Core Competencies: Backend Architecture, System Design, Microservices, CI/CD, Code Review, Scalability, Observability, Technical Ownership, Production fixes.

Languages: Java

Frameworks & Libraries: Spring Boot 3, Spring MVC, Spring Security, Spring Data JPA, Hibernate

Databases: Oracle SQL, MySQL, PL/SQL

Cloud & DevOps: AWS, Docker, Kubernetes, Git, CI/CD pipelines, Maven

Security Protocols: JWT, OAuth 2.0, Vulnerability Management, SAST, SCA, DAST

API Documentation: Swagger UI

Logging & Monitoring: Log4j

EXPERIENCE

Accenture – Java Developer

Hyderabad, Telangana, India

Client: AT&T

Dec 2022 – Present

- Designed and deployed cloud-native microservices using Spring Boot, Docker, and Kubernetes, achieving high availability and seamless horizontal scaling across distributed AT&T production environments.
- Designed and implemented an asynchronous scheduler using Java's Executor Framework to periodically fetch and process database records in parallel using multithreading, significantly reducing processing time in the front-end workflow and automating operational tasks, resulting in a ~90% reduction in manual effort.
- Improved API reliability and response consistency for critical AT&T services by diagnosing and resolving 20+ data inconsistency and timeout bugs across REST (JAX-RS) and SOAP (JAX-WS) interfaces.
- Reduced recurring production incidents by leading end-to-end RCA, bug resolution, and regression testing — improving system stability and cutting repeat issue rates across the platform.
- Validated a large-scale Oracle DB migration from on-premises to cloud by executing API, stress, and load testing - ensuring all post-migration performance benchmarks were met without service disruption.
- Maintained data integrity across high-transaction Oracle environments by identifying and resolving critical PL/SQL data errors, preventing downstream failures in AT&T's billing and provisioning systems.
- Drove end-to-end remediation of 100+ security vulnerabilities (SAST, SCA, DAST) in collaboration with security teams, significantly reducing the application's attack surface and achieving compliance targets.
- Elevated codebase quality and architectural consistency by leading peer code reviews and participating in design evaluations, mentoring junior developers on clean code and scalability best practices.

PROJECTS

LuxeLine E-Commerce Platform

- Technologies Used: Java 21, Spring Boot 3, Spring Data JPA, MySQL, AWS, JWT, Spring Security, Swagger UI
- Developed a full-featured e-commerce REST API using Java 21 and Spring Boot 3, applying microservices architecture principles with clean separation of concerns across auth, product, and order domains.
 - Secured all API endpoints using JWT-based authentication and Spring Security, implementing role-based access control for customer and admin flows.
 - Designed a normalized MySQL schema with Spring Data JPA and Hibernate ORM, optimizing queries for efficient data retrieval across product catalog, inventory, and order management modules.
 - Enforced data integrity across all endpoints using Spring Validation, and reduced boilerplate by 30%+ through Lombok, ModelMapper for DTO mapping, and Jackson for JSON serialization.
 - Implemented centralized exception handling with meaningful HTTP error responses, improving API debuggability and client-side reliability.
 - Configured Maven build tool for dependency management and seamless project compilation
 - Documented all API endpoints with Swagger UI, enabling self-serve testing and reducing onboarding time for new contributors.
 - Deployed the application on AWS EC2, gaining hands-on experience with cloud infrastructure setup, environment configuration, and hosting a Spring Boot application on a live server.

EDUCATION

Institute of Aeronautical Engineering	Hyderabad, Telangana, India
Bachelor of Electronics and Communications Engineering, CGPA – 8.42	Jul 2018 – Jul 2022

AWARDS

Skill Star Award — Accenture Celebrates Excellence (2024) Recognized for outstanding technical contributions and delivering high-impact solutions across the AT&T engagement.
